Yep, they really did. Deliver the thing late yesterday.
It was in the over-sized locker of my community mail-box when I returned from bike-riding this morning.
(I did not ride yesterday - no companion available and doubtful weather.)

I have now looked at the power-switch assy.
It switched on once for me, then no more.

The relay has an open coil.
Similar power relays on others of my projects do get an open-circuit coil sometimes.
But I cannot remember another case on Mako Head.
And I find no mention of a relay replacement in the work-notes folder for 1107.
This now-dead relay appears to have lasted about 11 years.

I have now replaced the relay with another (un-used) one.
I cannot say "new" precisely because the replacement came from a batch here that has a 2003 order-data for the procurement.
But from that we might be very sure that the part-number is the same.

I have switched the relay on-off quite normally 2 or 3 times.
Tomorrow I will try some more.

I will get it back into the mail after the Christmas foolishness disappears.

Merry Christmas and Happy New Year.

Tom

Thanks John.

The thing has not arrived yet, at 4:48 PM.
Tracking now says tomorrow, Tuesday.
